NotWired Groupware Platform Overview

The Next Generation of Calendars and Scheduling

The NotWired Groupware Platform is the first full-service offering to provide a multi-organization system that can manage millions of users through wired and wireless devices. With NotWired, enterprises can roll out highly scaleable, highly secure multi-user, groupware applications for the enterprise and external users.

NotWired is a single vendor solution provides a common infrastructure to deliver scheduling, calendaring, messaging and document sharing with one extensible source code framework.

Personal and group solution

People collaborate and communicate over wireless. Meetings, parties and other events can be scheduled and confirmed via email or messages on any device. Personal, group and shared calendars are supported.

Tasks/Reminders

Tasks can be created and delegated to anyone with an email addresses. Users may track tasks, reassign tasks, mark a task complete from any PC or wireless device. NotWired's task management supports personal and group usage.

Invitations

Look up other users, check their schedules for conflicts and invite them to dinner, a party or to a meeting. Invitations are generated via email or messages to wireless devices.

Meeting management

Host a meeting, create minutes and assign action items that may be tracked to completion. Busy managers will be able to see the progress of assignments throughout the organization and make sure action items from meetings are completed.

Contact management

NotWired's contact management allows for personal and shared contacts. Permissions may be setup by administrators for users to determine their access and update capabilities. Contact management is integrated with scheduling, task/activities and notes.

Instant messages and alerts

Messages can be quickly sent to mobile phones or email. The instant messaging does not require a separate email application to send a quick message and is integrated with the contact management.

Extensive wireless support

NotWired supports HDML, WML, PQA and J2ME enabled devices. NotWired operates on every major platform.

Extensible contact profiles

Extend the contact database to collect any information you wish about your users. Use this information for highly targeted marketing or for advertisers that wish to market to your customers.

Email marketing support

Email market to your customers. NotWired detects bounces and cleans up the database.

Enterprise-class security

NotWired was built with enterprises in mind. All applications and data are secure.

Channel Support

We support them through signup codes. You can pay commissions to you channels for referring new customers.

Support Standards

NotWired supports J2EE application servers and is 100% Java compliant

Empowering The Mobile Lifestyle™

Benefits

- Lower cost
- Easy Internet deployment
- Faster implementation
- Easy customization
- Support external users
- Integrated modules
- Integrated messaging
- Device and display independent
- Adaptable to any database
- Source code modification
- Easy to administer

NotWired Benefits

Empowering All Your Users

Lower cost

NotWired delivers sophisticated groupware applications at a much lower cost than today's client/server solutions or custom built applications.

Easy Internet deployment

Unlike solutions that are designed to be single enterprise solutions with centralized administration control, NotWired is designed for Internet and wireless deployment.

Faster implementation

NotWired was designed to be integrated into enterprise portals. It gives application developers complete control of the API and the ability to modify existing user interface screens. The source code availability of NotWired allows better and faster integration.

Easy customization

All applications in NotWired's groupware are modular and may be customized. The look and feel of screens may be changed with a simple HTML editor. Documented APIs and source code is available to create sophisticated workflows with existing modules.

Support external users

NotWired is designed and implemented with the ability to schedule and delegate workflow to users over the Internet. Any user with an email addresses or a supported device may participate in the groupware.

Integrated Modules

It is tough for your customers to switch data from one service to another when everyone is on a group system.

Integrated messaging

Everyone has news, weather, sports and stock quotes. NotWired group services differentiate you in the market by providing services not available on any portal.

Device and browser independent

NotWired was designed and tested using multiple PC, MAC, PDA and phone platforms. All shipping NotWired groupware and complimentary modules will work with any major Internet browser.

Adaptable to any database

NotWired utilizes a service and datasource layered design for all persistent storage transactions. Any database may be integrated with NotWired's groupware applications.

Source code modification

NotWired ships in source code format for developers to browse, extend and customize to meet their project needs.

Easy to administer

NotWired groupware has integrated application security logic in the application. Using NotWired's security infrastructure, development teams can define access control permissions to security management systems and control the access to NotWired applications. Developers simply need to access their centralized security database and populate a NotWired passport prior to using the groupware applications.
