Enterprise Services

For Delivering eBusiness Applications Fast

NotWired is an organization of highly talented and experienced designers and developers who can help your organization achieve the rewards of successful application delivery. We use start-of-the-art systems that are designed to become fundamental building blocks for your information strategy.

Experienced Management

Writing applications and infrastructure is difficult, time consuming and expensive. NotWired's management team has experience in embedded operating system design, client/server, mainframe technologies, UNIX, relational databases, OO, Internet technologies and wireless deployments. The leading principals of NotWired have over fifty years of information systems experience.

Proven Planning and Execution

NotWired team members plan and execute. We focus on a proven development process to avoid costly mistakes. Planning, following a process, and execution are the mantra for the NotWired organization. Our *Project Management* services help you deliver projects on-time and within budget.

Application Architecture

Application architecture can be applied to any technology. *Application Architecture* services will utilize proven designs with experience to give you maximum flexibility, capability and performance from your applications.

Internet Architecture

We've utilized years of experience with clients to create Internet applications that are deployed around the world. NotWired's *Internet Architecture* services will help you design and plan for application delivery over the Internet.

Wireless Architecture

The wireless Internet is upon us. NotWired has some of the most comprehensive experience in the industry. Recognized for excellence, www.notwired.com, is a sample of what we can do for your firm. NotWired's *Wireless Architecture* services will help you architect, design and deliver solutions best for your organization.

Data Architecture

Data is fundamental to any architecture. With the data architects and designers on our staff, our *Data Architecture* services help you design and implement data architectures that will scale to millions of wired and wireless Internet users.

Object Oriented Design

Fundamental to most application architectures in today's technologies is a strong object design. NotWired's *Object Oriented Design* services helps your organization design and implement base components to be reused in your organization. A common software model will save time and money while increasing quality of the software you deliver.

Infrastructure Development

Our development services can help your organizations deploy mission-critical applications quickly. We bring the experience of past development with us when designing and implementing infrastructure for applications. NotWired can assist in the creation of all layers from data access to user interface development. All software is developed with a process and methodology to deliver document and source code for easy maintenance.

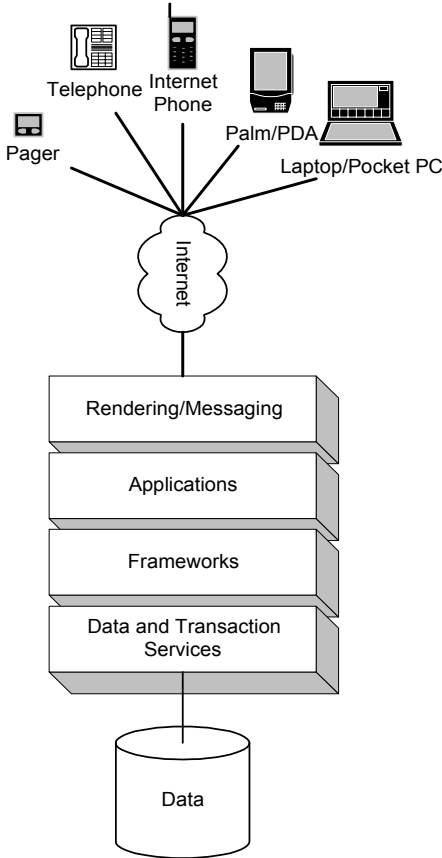

Outsourcing

NotWired can work with you to quickly develop your project with our staff. Oftentimes we bring our own toolkits to quickly deliver your project. NotWired's *Portal Fast Start* is one such offering.

NotWired's Portal Fast Start

For Delivering eBusiness Applications Fast

Application Infrastructure

Writing infrastructure is difficult, time consuming and expensive. NotWired relieves you of this burden by providing an flexible and robust application development platform.

Complete Application Security

Infrastructure to support complete application security by users, groups or organizations.

Unified Database Definitions

NotWired has developed a very flexible, capable and fast database implementation. This database system to support events, contacts, workflow, users and preferences can be implemented in any database or legacy system.

Data and Transaction Adapters

All database services utilize adapters. NotWired adapters can be made to integrate with any enterprise system. CICS, XML, sockets and other adapters can be made to implement some or all of NotWired services.

Polished Base Applications

While some systems deliver frameworks and expect you to make all end-user applications, NotWired comes complete with polished applications ready to insert into your efforts. These include groupware and collaboration applications, workflow processing, contact management, messaging and administrative tools.

We want to help your team integrate and deliver value-added solutions. As applications become increasingly Internet driven, NotWired has the tools, frameworks and expertise to insure success in today's fast paced environment.

Contact us to build the best service offering in the business, deploy it faster and at a lower cost than all other solutions.

Extensible Object Model

NotWired contains an open and extensible object model to implement your business logic and rules. This becomes the core of a system that applications utilize as a common component to communicate with all application layers.

Complete Profile and Preference Management

Users can manage profiles and preference for applications in the portal. This is an extensible definition and can be integrated into all your applications.

Communications Infrastructure

NotWired contains a complete messaging infrastructure that can be adapted to enterprise solutions such as Notes and Exchange. This communications infrastructure forms the basis of workflow for applications.

Standards-Based Solution

Java applications deploy on any platform. Support for HTML, WML, HDML, SMS, VoiceXML, XML, JSP and EJB. NotWired facilitates integration with standards.

Documentation

All frameworks come with design and code documentation to help your team get up and running quickly.
